'Ohi'a lehua (Metrosideros polymorpha) is the backbone of Hawai'i's native forests and watersheds which are our source of fresh water. A newly identified disease known as Rapid 'Ohi'a Death (ROD) is caused by a fungus called *Ceratocystis fimbriata*. ROD has killed thousands of 'ōhi'a trees across the island of Hawai'i. We can all help prevent the spread of ROD.
